		d identificati	on
Physical hazards	Not classified.		
Health hazards	Skin corrosion/irritation		Category 2
	Serious eye damage/eye ir	rritation	Category 2A
	Carcinogenicity		Category 1A
	Specific target organ toxici repeated exposure	ty following	Category 1
Environmental hazards	Not classified.		
WHMIS 2015 defined hazards	Not classified		
Label elements			
Signal word	Danger		
Hazard statement	Causes skin irritation. Cau organs through prolonged		irritation. May cause cancer. Causes damage to osure.
Precautionary statement			
Prevention	and understood. Do not bro	eathe dust. Wasl	not handle until all safety precautions have been read h thoroughly after handling. Do not eat, drink or smoke loves, protective clothing, eye protection and face
Response	IF ON SKIN: Wash with plenty of water. Take off contaminated clothing and wash it before reuse. If skin irritation occurs: Get medical attention. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical attention. IF exposed or concerned: Get medical attention.		
Storage	Not available.	-	
Disposal	Dispose of container in acc	cordance with loc	cal, regional, national and international regulations.

WHMIS 2015: Health Hazard(s) not otherwise classified	When this product is used in welding, the most important hazards are welding fumes, heat, radiation and electric shock.
(HHNOC)	Electrical shock can kill. Arc rays can injure eyes and burn skin. Welding arcs and sparks can ignite combustibles and flammable materials. Overexposure to welding fumes and gases can be hazardous.
WHMIS 2015: Physical Hazard(s) not otherwise classified (PHNOC)	When this product is used in welding, the most important hazards are welding fumes, heat, radiation and electric shock.
	Electrical shock can kill. Arc rays can injure eyes and burn skin. Welding arcs and sparks can ignite combustibles and flammable materials. Overexposure to welding fumes and gases can be hazardous.
Hazard(s) not otherwise classified (HNOC)	When this product is used in welding, the most important hazards are welding fumes, heat, radiation and electric shock.
	Electrical shock can kill. Arc rays can injure eyes and burn skin. Welding arcs and sparks can ignite combustibles and flammable materials. Overexposure to welding fumes and gases can be hazardous.
Supplemental information	Under GHS, the product is classified as non-hazardous in its solid form. However, certain processes such as cutting, milling, grinding and welding could result in some hazardous material being emitted.
	The classification information is for the hazardous elements which may be emitted during these processes.

### 3. Composition/Information on ingredients

### Mixture

Chemical name	Common name and synonyms	CAS number	%
Calcium fluoride		7789-75-5	3 - 10
Carbonic acid calcium salt (1:1)		471-34-1	3 - 10
Crystalline silica		14808-60-7	0.5 - 5
Manganese		7439-96-5	0.5 - 5
Potassium silicate		1312-76-1	0.5 - 5
Silicon		7440-21-3	0.5 - 5
Titanium oxide		13463-67-7	0.5 - 5

All concentrations are in percent by weight unless ingredient is a gas. Gas concentrations are in percent by volume.

	4. First-aid measures
Inhalation	In solid form, not a normal route of exposure. However during further processing (welding, grinding, burning, etc.): Call a physician if symptoms develop or persist.
Skin contact	For skin burns from arc radiation, immediately flush with cold water. Get medical attention for burns or irritations that persist. For reddened or blistered skin, or thermal burns, obtain medical assistance immediately.
Eye contact	Arc rays can injure eyes. For radiation burns due to arc flash, obtain medical attention IMMEDIATELY. If dust or fumes get in eyes: Rinse cautiously with water for several minutes. Call a physician immediately.
Ingestion	Avoid eating and drinking when in contact with fluxes, metal fume or powder which can cause ingestion of particulates. Do not induce vomiting. Never give anything by mouth if victim is unconscious or is convulsing. If vomiting occurs naturally, have victim lean forward to reduce risk of aspiration. Get medical attention if symptoms occur.
Most important symptoms/effects, acute and delayed	Short term exposure to fumes and gases from welding and other processes may result in metal fume fever, dizziness, nausea or dryness or irritation in the throat, nose or eyes. These emissions might also exacerbate pre-existing respiratory conditions like asthma or emphysema.
	Long term exposure to fumes and gases could result in conditions such as siderosis (iron deposits in the lungs), impacts on the central nervous system effects, bronchitis and other pulmonary effects.
Indication of immediate medical attention and special treatment needed	Symptoms may be delayed. Treat symptomatically.
General information	IF exposed or concerned: Get medical attention. If you feel unwell, seek medical advice (show the label where possible). Show this safety data sheet to the doctor in attendance.
	5. Fire-fighting measures

Suitable extinguishing media

Treat for surrounding material.

Unsuitable extinguishing media	Do not use water jet as an extinguisher, as this will spread the fire.
Specific hazards arising from the chemical	Explosion hazard: Avoid generating dust; fine dust dispersed in air in sufficient concentrations and in the presence of an ignition source is a potential dust explosion hazard. Welding arcs and sparks can ignite combustible and flammable materials. During fire, gases hazardous to health may be formed.
Special protective equipment and precautions for firefighters	Self-contained breathing apparatus and full protective clothing must be worn in case of fire.
Fire-fighting equipment/instructions	In case of fire and/or explosion do not breathe fumes. Move containers from fire area if you can do so without risk.
Specific methods	Use standard firefighting procedures and consider the hazards of other involved materials.
General fire hazards	May form combustible dust concentrations in air. As shipped, this product is nonflammable.
Hazardous combustion products	May include and are not limited to: Oxides of carbon. Irritating gases. Toxic fumes.
	6. Accidental release measures
Personal precautions, protective equipment and emergency procedures	Keep unnecessary personnel away. Keep people away from and upwind of spill/leak. Use only non-sparking tools. Dust deposits should not be allowed to accumulate on surfaces, as these may form an explosive mixture if they are released into the atmosphere in sufficient concentration. Wear appropriate protective equipment and clothing during clean-up. Do not breathe dust. Use a NIOSH/MSHA approved respirator if there is a risk of exposure to dust/fume at levels exceeding the exposure limits. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Ensure adequate ventilation. Local authorities should be advised if significant spillages cannot be contained. For personal protection, see section 8 of the SDS.
Methods and materials for containment and cleaning up	Eliminate all ignition sources (no smoking, flares, sparks, or flames in immediate area). Take precautionary measures against static discharge. Use only non-sparking tools. Avoid dispersal of dust in the air (i.e., clearing dust surfaces with compressed air). Collect dust using a vacuum cleaner equipped with HEPA filter. Stop the flow of material, if this is without risk. Large Spills: Wet down with water and dike for later disposal. Absorb in vermiculite, dry sand or earth and place into containers. Shovel the material into waste container. Following product recovery, flush area with water.
	Small Spills: Sweep up or vacuum up spillage and collect in suitable container for disposal. Wipe up with absorbent material (e.g. cloth, fleece). Clean surface thoroughly to remove residual contamination.
	Never return spills to original containers for re-use. Put material in suitable, covered, labeled containers. For waste disposal, see section 13 of the SDS.
Environmental precautions	Avoid discharge into drains, water courses or onto the ground.
	7. Handling and storage
Precautions for safe handling	Do not get in eyes, on skin, or on clothing. Do not breathe dust. Do not taste or swallow. Minimise dust generation and accumulation. Avoid significant deposits of material, especially on horizontal surfaces, which may become airborne and form combustible dust clouds and may contribute to secondary explosions. Routine housekeeping should be instituted to ensure that dusts do not accumulate on surfaces. Dry powders can build static electricity charges when subjected to the friction of transfer and mixing operations. Provide adequate precautions, such as electrical grounding and bonding, or inert atmospheres. Keep away from heat, sparks, open flames, hot surfaces No smoking. Explosion-proof general and local exhaust ventilation. Take preventive measures to prevent electric shock and excessive exposure to fumes and gases. Avoid prolonged exposure. When using, do not eat, drink or smoke. Wash hands thoroughly after handling.
Conditions for safe storage, including any incompatibilities	Keep out of reach of children. Keep containers tightly closed in a dry, cool and well-ventilated place. Protect from moisture and heat. Store locked up.
	8. Exposure controls/Personal protection

Appropriate engineering controls	Explosion-proof general and local exhaust ventilation. Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level. If engineering measures are not sufficient to maintain concentrations of dust particulates below the OEL (occupational exposure limit), suitable respiratory protection must be worn. Eye wash facilities and emergency shower must be available when handling this product.
Individual protection measure	es, such as personal protective equipment
Eye/face protection	Wear a welder's face shield to protect your face from radiation and flying particles.
	Wear a fire-resistant skull cap or balaclava hood under your helmet to protect your head from burns and UV radiation.
Skin protection	
Hand protection	Wear gauntlet-type cuff leather gloves or protective sleeves of similar material, to protect wrists and forearms. Leather is a good electrical insulator if kept dry.
Other	Wear high-top boots fully laced to prevent sparks from entering into the boots. Use fire-resistant boot protectors or spats strapped around the pant legs and boot tops, to prevent sparks from bouncing in the top of the boots.
	Wear layers of clothing. To prevent sweating, avoid overdressing in cold weather. Sweaty clothes cause rapid heat loss. Leather welding jackets are not very breathable and can make you sweat if you are overdressed.

Respiratory protection	Where exposure guideline levels may be exceeded, use an approved NIOSH respirator. Respirator should be selected by and used under the direction of a trained health and safety professional following requirements found in OSHA's respirator standard (29 CFR 1910.134), CAN/CSA-Z94.4 and ANSI's standard for respiratory protection (Z88.2).
Thermal hazards	Using a shield can help keep any sparks spray away from your clothing. Wear leather aprons to protect your chest and lap from sparks when standing or sitting.
General hygiene considerations	When using, do not eat, drink or smoke. Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants.
	9. Physical and chemical properties

Appearance	Steel rod with a flux coating
Physical state	Solid.
Form	Solid.
Colour	Not available.
Odour	Not available.
Odour threshold	Not available.
рН	Not available.
Melting point/freezing point	Not available.
Initial boiling point and boiling range	Not available.
Specific gravity	Not available.
Flash point	Not available.
Evaporation rate	Not available.
Flammability (solid, gas)	Not available.
Upper/lower flammability or exp	losive limits
Flammability limit - lower (%)	Not available.
Flammability limit - upper (%)	Not available.
Explosive limit - lower ( %)	Not available.
Explosive limit – upper (%)	Not available.
Vapour pressure	Not available.
Vapour density	Not available.
Relative density	Not available.
Solubility(ies)	Not available.
Partition coefficient (n-octanol/water)	Not available.
Auto-ignition temperature	Not available.
Decomposition temperature	Not available.
Viscosity	Not available.
Other information	
Pour point	Not available.
Explosive properties	Not explosive.
Oxidising properties	Not oxidising.

## 10. Stability and reactivity

Reactivity	The product is stable and non-reactive under normal conditions of use, storage and transport.
Possibility of hazardous reactions	No dangerous reaction known under conditions of normal use.
Chemical stability	Material is stable under normal conditions.
Conditions to avoid	Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. Minimise dust generation and accumulation.
Incompatible materials	None known.
Hazardous decomposition products	Does not decompose under normal conditions.

## 11. Toxicological information

Routes of exposure	Inhalation. Ingestion. Skin contact. Eye contact.			
Information on likely routes of ex	kposure			
Ingestion	May cause stomach distress, nausea or vomiting.			
Inhalation	Inhaling welding fumes and gases can pose health risks. Dust may irritate respiratory system. Prolonged inhalation may be harmful.			
Skin contact	Arc rays can burn skin. Dust or powder may irritate the skin.			
Eye contact	Arc rays can injure eyes. Mechanical cutting could produce dust that may cause irritation.			
Symptoms related to the physical, chemical and toxicological characteristics	Severe eye irritation. Symptoms may include stinging, tearing, redness, swelling, and blurred vision. Permanent eye damage including blindness could result. Dusts may irritate the respiratory tract, skin and eyes. Skin irritation. May cause redness and pain.

Carcinogenicity	In 1997, IARC (the International Agency for Research on Cancer) concluded that crystalline silica inhaled from occupational sources can cause lung cancer in humans. However in making the overall evaluation, IARC noted that "carcinogenicity was not detected in all industrial circumstances studied. Carcinogenicity may be dependent on inherent characteristics of the crystalline silica or on external factors affecting its biological activity or distribution of its polymorphs." (IARC Monographs on the evaluation of the carcinogenic risks of chemicals to humans, Silica, silicates dust and organic fibres, 1997, Vol. 68, IARC, Lyon, France.) In June 2003, SCOEL (the EU Scientific Committee on Occupational Exposure Limits) concluded that the main effect in humans of the inhalation of respirable crystalline silica dust is silicosis. "There is sufficient information to conclude that the relative risk of lung cancer is increased in persons with silicosis (and, apparently, not in employees without silicosis exposed to silica dust in quarries and in the ceramic industry). Therefore, preventing the onset of silicosis will also reduce the cancer risk" (SCOEL SUM Doc 94-final, June 2003) According to the current state of the art, worker protection against silicosis can be consistently assured by respecting the existing regulatory occupational exposure limits. May cause cancer. Occupational exposure to respirable dust and respirable crystalline silica should be monitored and controlled.

		13. Disposal considerations		
Disposal instructions		eclaim or dispose in sealed containers at li ainer in accordance with local/regional/na		
Local disposal regulations	Dispose in ac	cordance with all applicable regulations.		
Hazardous waste code	The waste co disposal com	de should be assigned in discussion betw pany.	een the user, the producer and the waste	
Waste from residues / unused products		accordance with local regulations. Empty ues. This material and its container must b uctions).		

Since emptied containers may retain product residue, follow label warnings even after container is emptied. Empty containers should be taken to an approved waste handling site for recycling or disposal.

### 14. Transport information **Transport of Dangerous Goods** Classification Method: Classified as per Part 2, Sections 2.1 - 2.8 of the Transportation of Dangerous Goods Regulations. If applicable, the technical name and the classification of the (TDG) Proof of Classification product will appear below. U.S. Department of Transportation (DOT) Not regulated as dangerous goods. Transportation of Dangerous Goods (TDG - Canada) Not regulated as dangerous goods. 15. Regulatory information **Canadian federal regulations** This product has been classified in accordance with the hazard criteria of the HPR and the SDS contains all the information required by the HPR. Canada CEPA Schedule I: Listed substance Calcium fluoride (CAS 7789-75-5) Listed. Carbonic acid calcium salt (1:1) (CAS 471-34-1) Listed. Silicon (CAS 7440-21-3) Listed. Titanium oxide (CAS 13463-67-7) Listed. Canada DSL Challenge Substances: Listed substance Crystalline silica (CAS 14808-60-7) Listed. Canada Priority Substances List (Second List): Listed substance Carbonic acid calcium salt (1:1) (CAS 471-34-1) Listed. Silicon (CAS 7440-21-3) Listed. Listed. Titanium oxide (CAS 13463-67-7) Export Control List (CEPA 1999, Schedule 3) Not listed. **Greenhouse Gases** Not listed. **Precursor Control Regulations** Not regulated. WHMIS 2015 Exemptions Not applicable This product is a "Hazardous Chemical" as defined by the OSHA Hazard Communication **US Federal regulations** Standard, 29 CFR 1910.1200. TSCA Section 12(b) Export Notification (40 CFR 707, Subpt. D) Not regulated. CERCLA Hazardous Substance List (40 CFR 302.4) Manganese (CAS 7439-96-5) Listed. SARA 304 Emergency release notification Not regulated. OSHA Specifically Regulated Substances (29 CFR 1910.1001-1052) Crystalline silica (CAS 14808-60-7) Cancer lung effects immune system effects kidney effects Superfund Amendments and Reauthorization Act of 1986 (SARA) SARA 302 Extremely No hazardous substance SARA 311/312 Hazardous Yes chemical **Classified hazard** Skin corrosion or irritation Serious eye damage or eye irritation categories Carcinogenicity Specific target organ toxicity (single or repeated exposure) SARA 313 (TRI reporting) **Chemical name** CAS number % by wt.
